Always on top	Windows Ctrl t
Enable clipboard history	Windows v
Sticky notes	Windows Alt s
Task switcher	Alt tab

File Explorer

Action	Shortcut
Create new folder	Ctrl Shift n
Copy file path	Ctrl Shift c

fman

Action	Shortcut
GoTo	Ctrl p
Explorer	f10

Action	Shortcut
Switch side	Tab
Command Palette	Ctrl Shift p

Codecs

K-Lite	For all common audio and video file formats
------------------------	---

Drivers

Novation Components	Novation Components
Wacom	Wacom

[Clean install windows](#)

Command Prompt

Show folder structure

Move to the folder by using CD
Put this behind the file path

```
tree /a /f > output.doc
```

Output.doc is the document file where the entire directory tree is saved.
Open it to check out the tree!

Delete all “._Thumbs.db” files

Open a Command Prompt or Terminal: On Windows, press Win + R, type cmd, and hit Enter. On macOS or Linux, open the Terminal. Navigate to the Directory: Use the cd command to navigate to the directory where your files are located. For example:

```
cd /path/to/your/directory
```

Delete the Files: Run the following command to delete all “._Thumbs.db” files in the directory and its subdirectories:

```
del /s /q ._Thumbs.db
```

/s searches for files in subdirectories. /q suppresses confirmation prompts. If you're on

macOS or Linux, use the rm command instead:

```
find . -type f -name "._Thumbs.db" -exec rm {} \;
```

Confirm Deletion: Verify that the files have been deleted by checking the directory. Remember to replace `/path/to/your/directory` with the actual path to your file structure. Be cautious when deleting files, especially system files, to avoid unintended consequences.

Automated tasks

Using Task Scheduler in combination with scripts

Using a .bat script for the execution and a .vbs to keep it in the background

Emergency

Name	Description
Display Driver Uninstaller	For when you are having display issues
