Windows

Make Windows feel snappier

Make Windows snappy -> Turn off "animate controlls and elements inside windows"

Never download software from the windows store, then you won't be able to create shortcuts from your software

Shortcuts

General

Action	Shortcut
Display desktop	Windows d
Open file explorer	Windows e
Delete whole word	Ctrl Backspace
Select characters	Shift arrow
Select words	Ctrl Shift arrow
Move Desktop	Ctrl windows \leftarrow or \rightarrow

Windows Run Commands

%appdata% shell:startup taskschd.msc

Codecs

K-Lite For all common audio and video file formats

Drivers

Novation ComponentsNovation ComponentsWacomWacom

Clean install windows

Command Prompt

Show folder structure

Move to the folder by using CD Put this behind the file path tree /a /f > output.doc Output.doc is the document file where the entire directory tree is saved. Open it to check out the tree!

Delete all "._Thumbs.db" files

Open a Command Prompt or Terminal: On Windows, press Win + R, type cmd, and hit Enter. On macOS or Linux, open the Terminal. Navigate to the Directory: Use the cd command to navigate to the directory where your files are located. For example:

note

cd /path/to/your/directory

Delete the Files: Run the following command to delete all "._Thumbs.db" files in the directory and its subdirectories:

del /s /q ._Thumbs.db

/s searches for files in subdirectories. /q suppresses confirmation prompts. If you're on macOS or Linux, use the rm command instead:

find . -type f -name "._Thumbs.db" -exec rm {} \;

Confirm Deletion: Verify that the files have been deleted by checking the directory. Remember to replace /path/to/your/directory with the actual path to your file structure. Be cautious when deleting files, especially system files, to avoid unintended consequences.

Automated tasks

Windows has a build in Task Sceduler that you can use in combination with scripts. This gives you an easy way to create a backup or any other task that needs to happen periodically. Usually you can use a .bat script for the execution and a .vbs script to keep the terminal in the background

Use Robocopy to automate backups

Emergency

NameDescriptionDisplay Driver UninstallerFor when you are having display issues
